

Reliable protection from Kevlar® 450 PU against chemicals and injuries.

“Kevlar® 450 PU offers me peace as keeping the workforce safe is important for me.”

Balaram Datta, Director, Datson Products, Pune

Synopsis

- I was unaware that Kevlar® manufactured its own gloves. I liked the features when I looked at DuPont products online and started using them. Mainly, they are highly cut and puncture-resistant.
- I have gotten them for my workers regularly for the last 3 years as it offers me peace of mind regarding workforce safety.

Challenges

We are 30 years old manufacturers of rubber extruded products and nitrile gloves. Our clients include large automotive giants such as Tata Motors, and we are vendors to other government companies. My team constantly works with sharp instruments and machines. And I am continually worried that they must be protected from hand injuries while performing fabrication-related tasks.

Solutions

Earlier, we used locally made gloves while performing risky and hazardous tasks. I was not aware that Kevlar® made its gloves. I was checking protection equipment online and came across Kevlar® gloves, which offered the perfect protection for our workforce.

Our workers need to use them for long hours, and we needed breathable material gloves. Also, since they use sharp objects, I needed to ensure that the gloves don't get punctured easily; we purchased Kevlar® 450 PU then and were extremely satisfied with them. Since then, we have been using Kevlar® 450 PU for all our workers. We order it regularly and ensure that the workforce uses the gloves to stay safe.

The Kevlar® 450 PU gloves are highly reliable, and I see many workshops in my industrial zone use them.
